

Tailwind for the future

Fresh ideas for regenerative energy

The aim: One hundred per cent renewable energy

Big challenges call for big solutions. As strong and reliable wind experts, we are therefore committed to achieving one big aim: to establish a climate-friendly energy supply based wholly on renewable energy sources. After all, wind power not only helps to reduce the greenhouse gases that are harmful to the climate. It also makes Europe less dependent on raw material imports. And provides affordable energy on a long-term basis.

Wind is driving jobs

Wind power is not only good for the environment, but is also driving the employment market. That's because the industry is attractive to smart people who work hard and want to make a difference at a high technological level. Alterric will also significantly expand its team over the coming years and create a number of jobs in technical, commercial and other areas.

100%

Shaping the future together

Since spring 2021, the Aloys Wobben Foundation, the sole ENERCON shareholder, and EWE AG have been combining their many years of experience and multifaceted expertise in the field of onshore wind power in the joint enterprise Alterric.

The new company not only has the will to drive climate protection and sustainability. Above all else, the Alterric team combines reliability, efficiency and the ability to work in partnership on equal terms.

As a partner working in the wind power business with Alterric, you will benefit from our comprehensive knowledge of the development, construction and operation of onshore wind farms. In addition, Alterric has an excellent credit rating and reliable liquidity. Together we want to do great things to shape a great future.

Alterric possesses the ideal attributes for a successful collaboration: over three decades of success in the wind business,

high technical standards and sound knowledge of the energy industry. Whether technical innovations, grid connection, energy trading, power storage or the wide range of extended green electricity applications through sector coupling, at Alterric you will encounter experts who think and act holistically.

Our services

We offer professionalism and experience along the entire value chain. From site acquisition and project management to construction, operation and repowering.

Incidentally, our expertise and partnership do not stop at the feed-in point. And above all else we remain on hand during operation as a dependable partner.

01 ACQUISITION

Site searches with sound judgement: our experts check whether and where wind power pays off. Close cooperation with owners of green spaces, arable land or forest areas forms the basis for every project. Our experience permits reliable energy harvesting forecasts to be made.

05 REPOWERING

New ideas for old wind farms: we provide customised repowering concepts for wind farms that got the energy transition up and running in the pioneering days. The result: more climate-neutral green electricity and more yields.

02 PROJECT MANAGEMENT

Thinking of everything: as experienced planners, we are critical in the right places. We know and check all factors that need to be taken into account in the development and approval phase. Experience that pays off – because our projects have an especially high success rate.

06 PARTNER

Success is best achieved in a team: since successful wind farm concepts rely on acceptance, we are committed to engaging in dialogue. We convince citizens, local decision-makers and authorities with individual wind farm concepts.

03 CONSTRUCTION

Making complex things easy: we make sure that everything is planned in full so that the different trades can work perfectly together during the construction phase. Needless to say we also supervise and manage the construction works – right up until the wind turbines receive final approval.

04 OPERATION

Making sure everything runs smoothly: our technical and commercial asset management team ensures that the wind farms are run safely and efficiently. That is why we also remain on hand as a partner.

01 Project partners

02 Local authorities

03 Landowners

04 Industry and energy suppliers

05 Turbine manufacturers

With Alterric by your side, you will help to shape the energy transition and can seize commercial opportunities.

Whether for landowners, project partners, industry, energy suppliers, for local authorities or citizens, our sound planning skills and development expertise make projects a success for everyone involved.

01 FOR PROJECT PARTNERS

We work in teams that bring together different strengths and perspectives. This can be a decisive success factor. That is why Alterric is also committed to partnerships with developers and planners. What we bring to the table: experience, solution strategies and reliability. As a major player, we can also shoulder risks.

02 FOR LOCAL AUTHORITIES

Wind power on regional sites gives local authorities considerable potential to create value. Such incentives include business tax revenue, orders for local businesses and leasing income for landowners. In addition, Alterric offers citizen participation models for many of its projects.

03 FOR LANDOWNERS

Plans for the energy transition require a solid basis. That is why Alterric works in close partnership with owners of green spaces, arable land and forest areas from the very beginning. The leasing of sites for wind turbines contributes to the energy transition and generates a reliable additional source of income.

04 FOR INDUSTRY AND ENERGY SUPPLIERS

Our powerful generation portfolio provides interesting options for sustainable production and energy supply using 100 per cent green electricity.

05 FOR TURBINE MANUFACTURERS

We plan our wind farms without being tied to any particular manufacturer. For each project and each location Alterric invites tenders without favouring any one single brand. We have been working with all of the leading turbine manufacturers for a number of years.

Our mission is to increase the share of renewable energy in Europe to **100 per cent** in the medium term.

We are well on the way to achieving this ambitious aim: Our existing wind turbines already have an installed capacity of **2,300 megawatts**. This makes us one of the biggest generators of green electricity in Central Europe. Above all else, it also means a reduction in CO₂ emissions to the tune of seven million tonnes per year. And a further **9,400 megawatts** are waiting to be produced in our project pipeline. By **2030**, we want to create an additional **200 megawatts** per year and invest a total of **3.6 billion** euros in the future of energy. This will increase our generation capacity for green energy to around **5 gigawatts**.

Born in Germany. At home in Europe.

Alterric is successfully building up its wind strength both regionally and internationally. Besides our seven locations in Germany, we also have offices in France, Sweden and Greece for close partnerships close to you.

AN OVERVIEW OF OUR LOCATIONS

Alterric in Germany:
Aurich, Oldenburg, Husum, Hanover,
Bremen, Magdeburg, Mainz

Alterric in Europe:
Greece, France and Sweden.

THERE IS A GREAT DEAL TO TALK ABOUT.

Are you interested in a cooperation partnership that contributes to the energy transition or do you own land that is suitable for wind power generation? We look forward to getting to know you.

Contact us by telephone:
+49 (0) 4941 604 1100 or by email:
kontakt@alterric.com. And find out

The energy of the future is called teamwork

We are working to create a world where renewable energy is available to everybody. That is how we are doing our bit to conserve the planet.

Do you share this idea? Then you have found a partner in us that realises projects with energy, innovative ideas and a solid foundation of experience and economic power. Let's get started on a joint project. For you. For us. For the future.
