

# Tailwind for the future

Fresh ideas for renewable energy

# Wind. Sun. Thinking ahead. 100 percent energy transition.

100%

Big challenges need big solutions. As an experienced expert in green energy, Alterric has set itself an ambitious goal: to build an energy supply that is 100 percent based on renewable sources and at the same time climate-friendly, reliable, and affordable. After all, wind power and photovoltaics not only reduce climate-damaging greenhouse gases. They also make Germany and Europe less dependent on imported raw materials. And thus form the basis for a plannable energy landscape with fair prices for households, commerce, and industry.

## Renewables as a job motor

The wind and solar energy sector are also driving the job market. Our diverse fields of activity are attractive for bright minds who want to get stuck in and make a difference: in meaningful jobs at a high technological level. Alterric has already established strong teams here with 400 employees and will continue to expand them at all locations in the coming years – with numerous jobs in technical, commercial, and other areas.

# Shaping the future together

In 2021, ENERCON's sole shareholder Aloys Wobben Foundation and EWE AG combined their many years of experience and multi-layered expertise in the field of onshore wind power in the joint venture Alterric. The Alterric teams are united by the desire to promote climate protection and sustainability – combined with values such as reliability, performance, and partnership. Under the premise "Wind. Sun. Thinking ahead.", photovoltaics now also complements the Alterric portfolio.

When it comes to renewable energies, you benefit from our comprehensive knowledge of the development, construction, and operation of onshore energy parks. In addition, Alterric has an excellent credit rating and reliable liquidity. Together, we want to shape a great future with great commitment. Alterric has the best prerequisites for a successful cooperation: over three decades of success in the wind business, high technical standards, and energy industry expertise. Whether

technical innovations, grid connection, energy trading, electricity storage or the broad spectrum of expanded green power applications through sector coupling – with us you will meet experts who think and act holistically.

## Our services

We offer dedication and experience along the entire value chain. From site acquisition, project management and construction to operation and repowering.

By the way: our expertise and our partnership do not end at the feed-in point. And above all else Alterric remains on hand during operation as a dependable partner.

### 01 ACQUISITION

Searching for land with a sense of proportion: our site securing experts check whether and where wind and solar energy are worthwhile. Close cooperation with owners of green, farm or forest land builds the foundation for every project. Our experience enables reliable forecasts for the energy harvest.

### 05 REPOWERING

New ideas for older energy parks: We offer customised repowering concepts for plants that got the energy transition off the ground in the pioneering days. The result: more climate-neutral green electricity and higher yields.

### 02 PROJECT MANAGEMENT

Thinking of everything: as experienced planners, we are critical in the right places. We know and check all factors that need to be taken into account in the development and approval phase. Experience that pays off – because our projects have an especially high success rate.

### 06 PARTNER

Convincing success: Wind and solar parks need acceptance. That is why we focus on dialogue, information, and individual concepts – with the aim of involving citizens, local decision-makers and authorities.

### 03 CONSTRUCTION

Making complex things easy: we make sure that everything is planned in full so that the different trades can work perfectly together during the construction phase. Needless to say we also supervise and manage the construction works – right up until the wind turbines receive final approval.

### 04 OPERATION

Making sure everything runs smoothly: our technical and commercial asset management team ensures that the wind farms are run safely and efficiently. That is why we also remain on hand as a partner.

# 01 Project partners

# 02 Local authorities

# 03 Landowners

# 04 Industry and energy suppliers

# 05 Turbine manufacturers

With Alterric by your side, you will help to shape the energy transition and can seize commercial opportunities.

Whether for landowners, project partners, industry, energy suppliers, for local authorities or citizens, our sound planning skills and development expertise make projects a success for everyone involved.

## 01 FOR PROJECT PARTNERS

We work in teams that bring together different strengths and perspectives. This can be a decisive success factor. That is why Alterric is also committed to partnerships with developers and planners. What we bring to the table: experience, solution strategies and reliability. As a major player, we can also shoulder risks.

## 02 FOR MUNICIPALITIES

Wind and solar energy on regional land means a great potential for value creation for municipalities. This includes business taxes and the EEG municipal levy as well as contracts for local businesses and lease income for landowners. In addition, Alterric offers participation models for municipalities and citizens in many projects.

## 03 FOR LANDOWNERS

Energy transition projects need a solid foundation. That is why Alterric works closely and in partnership with the owners of grassland, arable land, or farmland from the very beginning. Leasing land for wind turbines and photovoltaic systems contributes to the energy transition and creates a reliable additional income.

## 04 FOR INDUSTRY AND ENERGY SUPPLIERS

Our powerful generation portfolio provides interesting options for sustainable production and energy supply using 100 per cent green electricity.

## 05 FOR TURBINE MANUFACTURERS

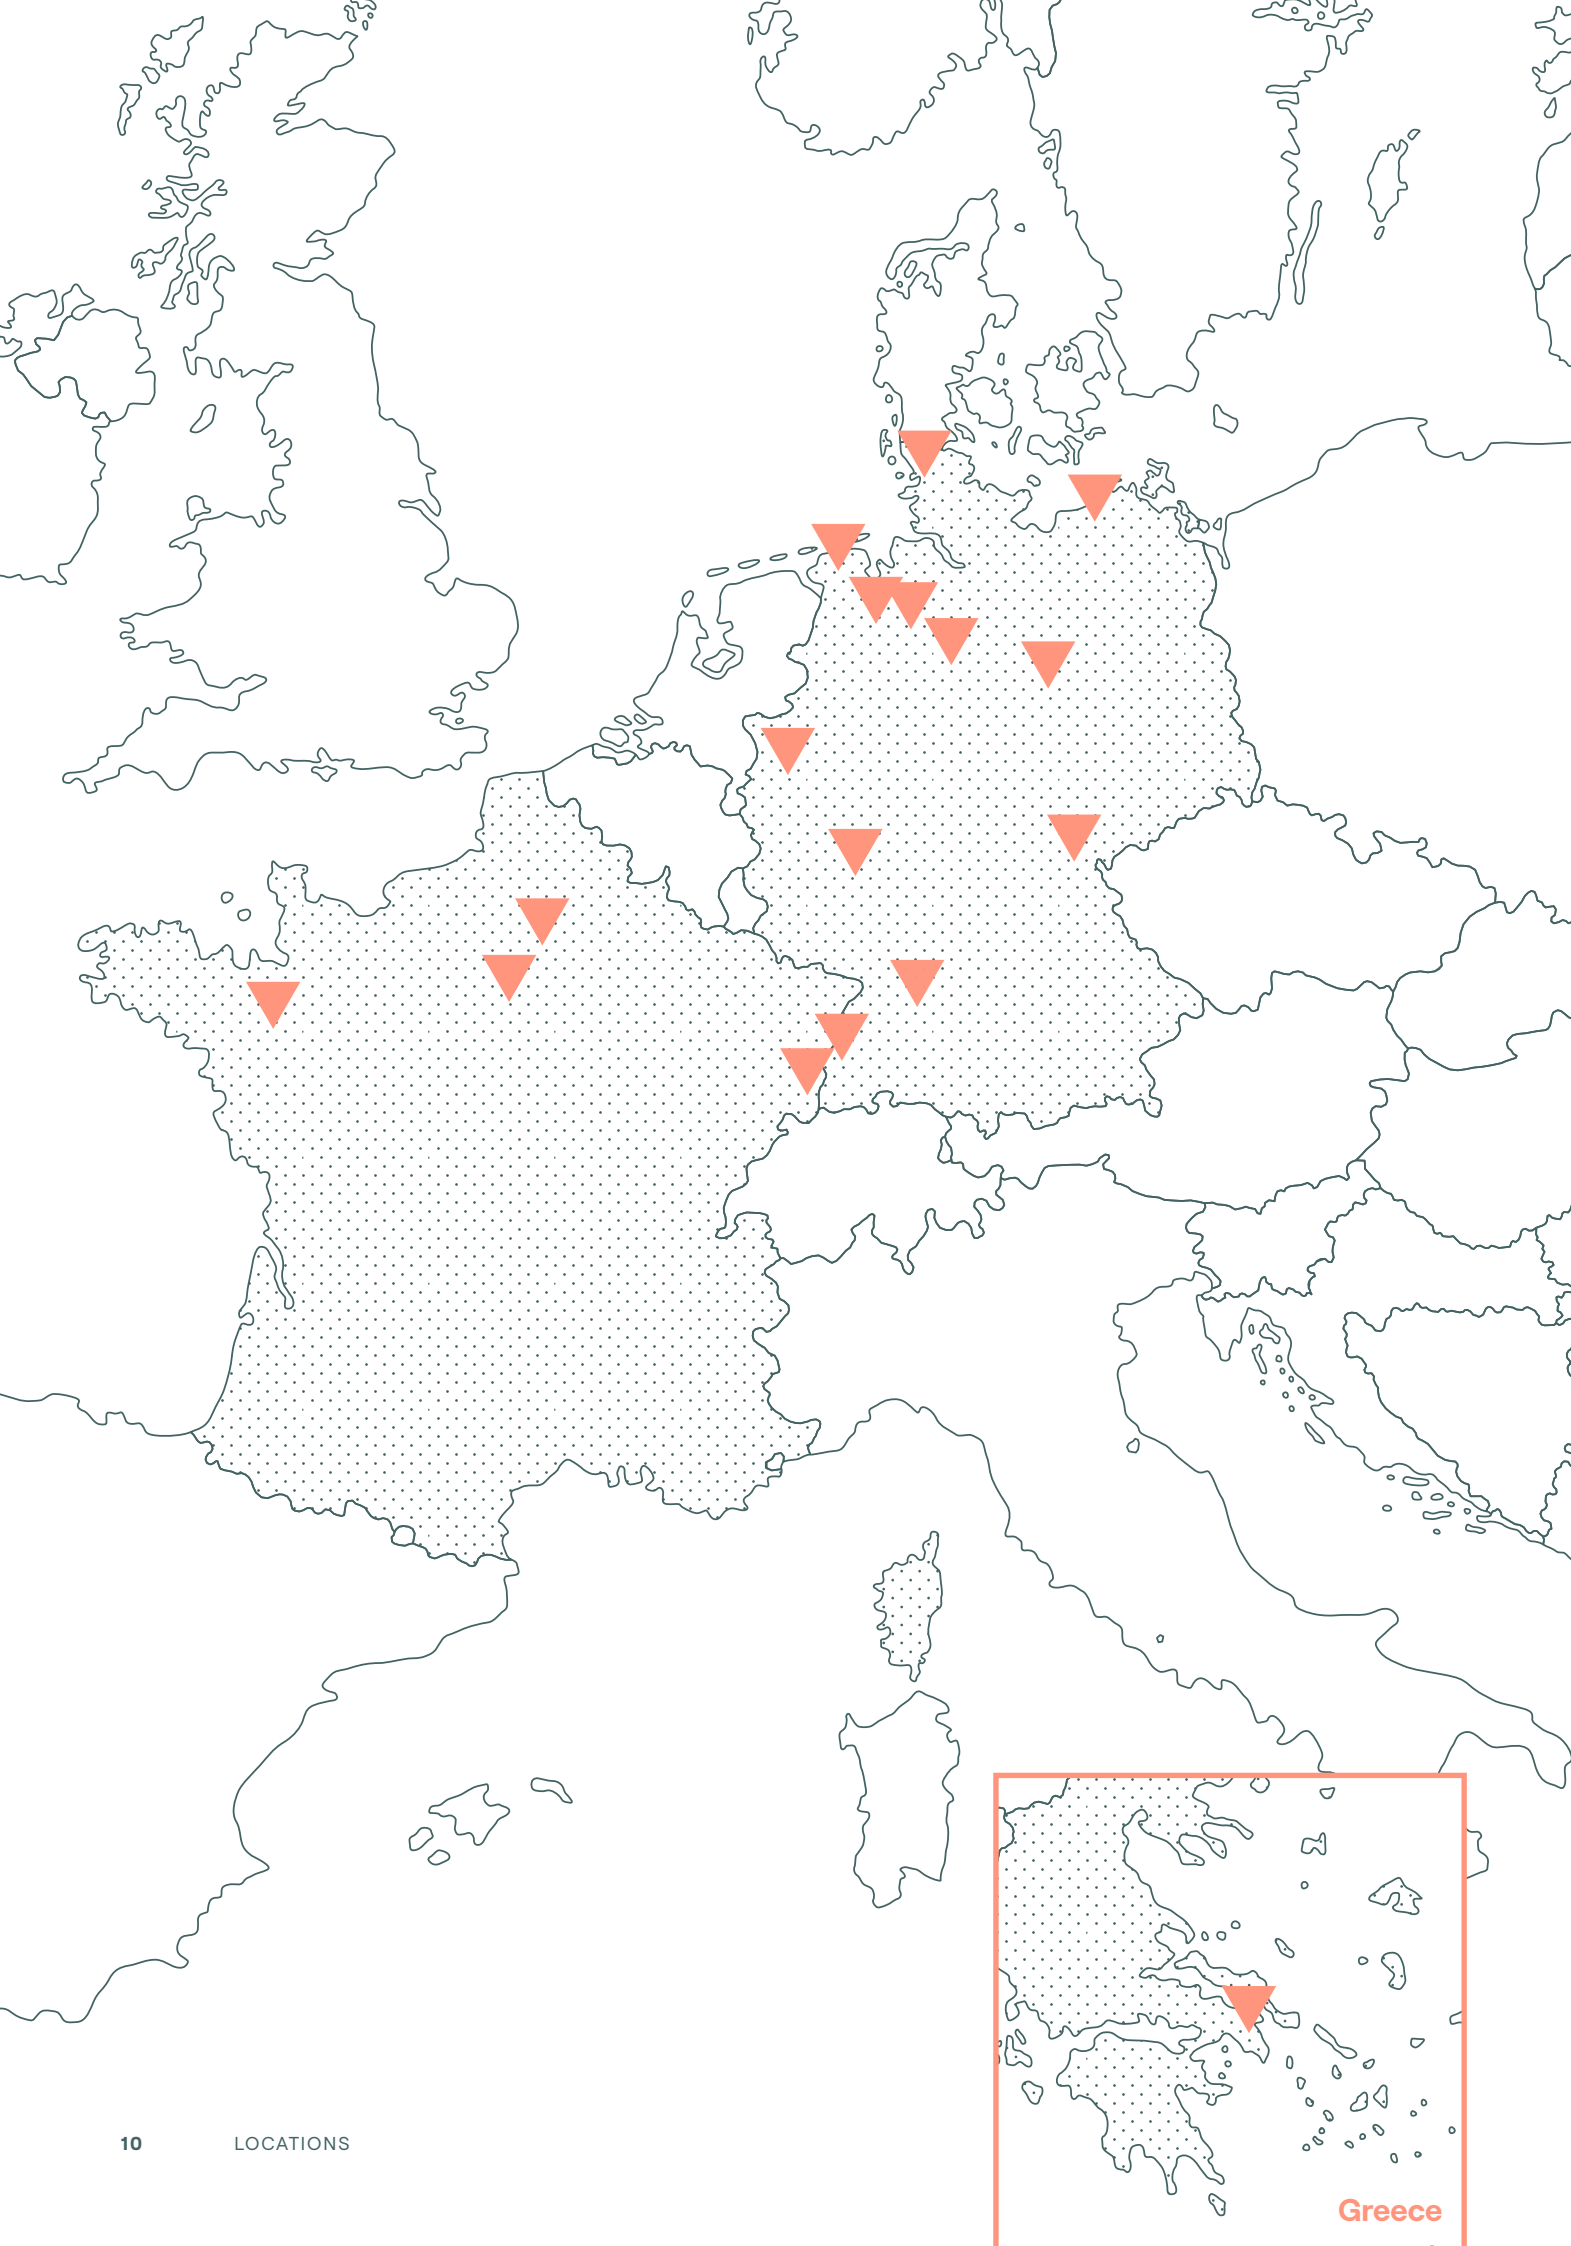

We plan our wind and solar farms without being tied to a specific manufacturer. Alterric invites tenders for every project and every location, regardless of brand. To this end, we have been working with all leading turbine and system manufacturers for many years.

Our mission is: **100 percent energy transition**  
– for Germany and Europe.

We have already made good progress towards this ambitious goal: The Alterric plant portfolio already comprises **2,400 megawatts** of installed capacity. This makes us one of the largest green power producers in Central Europe. Above all, it also means more than seven million tonnes of carbon dioxide emissions saved per year. And in our project pipeline, another **10,000 megawatts** are waiting to be implemented. By **2030**, we want to realise more than 200 megawatts of new capacity per year and invest a total of 3.6 billion euros in the energy future with power from wind and sun. This will expand Alterric's green energy generation capacity to around 5 gigawatts.

# Born in Germany. At home in Europe.

Alterric successfully expands wind and solar energy regionally and internationally. We have eleven locations nationwide as well as offices in France and Greece to ensure a cooperative exchange in your vicinity.

## AN OVERVIEW OF OUR LOCATIONS

Alterric in Germany:  
Aurich, Oldenburg,  
Hannover, Bremen, Husum,  
Rostock, Magdeburg, Mainz,  
Hof, Herrenberg,  
Freiburg and Düsseldorf

Alterric in Europe:  
France and Greece

## THERE IS MUCH TO DISCUSS

Are you interested in an energy transition cooperation, or do you own suitable land for wind power or photovoltaics? We look forward to getting to know you.

Contact us by phone:  
**+49 (0) 4941 6041 - 100** or by  
email: [kontakt@alterric.com](mailto:kontakt@alterric.com). And

# The energy of the future is called teamwork

We are committed to a world in which renewable energies become available to everybody. That is how we are doing our bit to preserve the earth.

Do you share this idea? Then in Alterric you have found a partner who realises projects with energy, innovative ideas, and a solid foundation: with experience and economic power. Let's get started on a joint project. For you. For us. For the future.
