

Tailwind for the future

Fresh ideas for
renewable energies

Alterric

Planning. Constructing. Operating.

**100 Percent Energy
Transition.**

Alterric: Planning. Constructing. Operating.

Big challenges require big solutions. As an experienced expert in renewable energy generation, Alterric pursues an ambitious goal of building an energy supply based entirely on **100 percent** renewable sources. We are committed to an **energy future** that avoids greenhouse gases and is both reliable and affordable. To achieve this, we are creating intelligent energy solutions for future generations.

Renewable energy job engine

The industry for green energy generation and a sustainable energy system is also driving the job market. Our diverse fields of activity are attractive for experts who want to get involved in and make a difference: in meaningful jobs **at a high technological level.**

Alterric has already established strong teams with **600 employees** and will continue to expand these at all locations – with attractive jobs in technical, commercial and other areas.

Shaping the future together

Alterric, headquartered in Aurich in northern Germany, develops, plans, markets and manages energy parks. Our core markets are Germany, France and Greece. Alterric currently operates over 2,400 megawatts of installed onshore wind capacity in its own portfolio. In 2024, our plants produced 3,350 gigawatt hours of wind energy for the German market alone.

To ensure a successful energy transition, we plan to add storage to some of our wind farms in the future; we also plan to integrate photovoltaic modules into suitable wind energy sites in the coming years. The advantages of these hybrid parks are greater efficiency and grid stability.

Our expertise

Our partners benefit from our extensive knowledge in planning, construction and operation of onshore energy parks. In addition, Alterric has an excellent credit rating and reliable liquidity. We provide an ideal setting for a profitable collaboration: around four decades of success in the wind business, high technical standards and energy industry expertise. In addition to planning, constructing, and operating, we are also well versed in grid connections and energy trading. For the future, we are planning to integrate

electricity storage facilities and hybrid parks. We want to systematically exploit the potential of these solutions for the energy system and have the necessary infrastructure and experience to do so. We offer expertise and professionalism along the entire value chain. By the way: We build our partnerships beyond the feed-in point. Alterric remains a reliable local partner in the long term – from operation to repowering.

1 ACQUISITION

Site procurement with experience: Our acquisition experts check whether and where renewable energies are viable. Close cooperation with the owners of grassland, farmland or forestry land build the foundation for every project. Our expertise ensures reliable forecasts for a high-yield energy harvest.

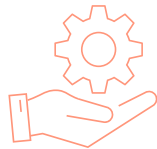

2 PROJECT MANAGEMENT

Focusing on success: as experienced planners, we take a close look at crucial points. We know and check all factors that need to be considered during the development and official approval phases. Experience pays off – our projects have an especially high success rate.

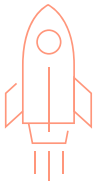

3 CONSTRUCTION

Making complex matters work: We ensure that everything is fully planned so that different trades can collaborate perfectly together during the construction phase. We also supervise and manage the construction works – right up until the erected wind turbines are officially approved.

4 OPERATION

Making sure things run smoothly: Our commercial operations management ensures an efficient energy generation; while our technical asset management takes responsibility for the safe operation of the 250 Alterric wind farms. We also run our own control room.

5 REPOWERING

New concepts for older energy parks: We offer customized repowering ideas for plants that got the energy transition off the ground in the pioneering days. The result: more climate-neutral green electricity and higher yields.

6 PARTNERS

Convincing progress: Renewable energies need acceptance. That is why we focus on dialogue, information, and individual concepts – with the aim of involving citizens, local decision-makers and authorities.

1 Project partners 2 Local authorities 3 Landowners 4 Industry and energy suppliers 5 Turbine manufacturers

With Alterric at your side, you can take part in shaping the energy transition while enjoying the benefits of economic opportunities.

Whether for landowners, project partners, industry or energy suppliers, whether for municipalities or citizens – our sound planning and proven implementation expertise make projects a success for everyone involved.

1 FOR PROJECT PARTNERS

We work in teams that bring together a variety of strengths and perspectives. This is a key factor for success. That's why Alterric also relies on partnerships with developers and planners. What we bring to the table: Experience, solution strategies and reliability. As a market leader, we can also shoulder risks.

2 FOR MUNICIPALITIES

Wind and hybrid farms on regional land offer municipalities great potential for value creation. This includes business taxes and the German EEG municipal levy as well as contracts for local businesses and lease income for landowners. In addition, Alterric offers participation models for municipalities and citizens in many projects.

3 FOR LANDOWNERS

Energy transition projects need a solid foundation. That is why, from the very beginning, Alterric works in close partnership with the owners of grassland, arable land and forestry areas. Leasing land for renewable energy production contributes to the energy transition and provides a reliable additional income.

4 FOR INDUSTRY AND ENERGY SUPPLIERS

Our powerful generation portfolio provides interesting options for sustainable production and energy supply using 100 per cent green electricity.

5 FOR TURBINE MANUFACTURERS

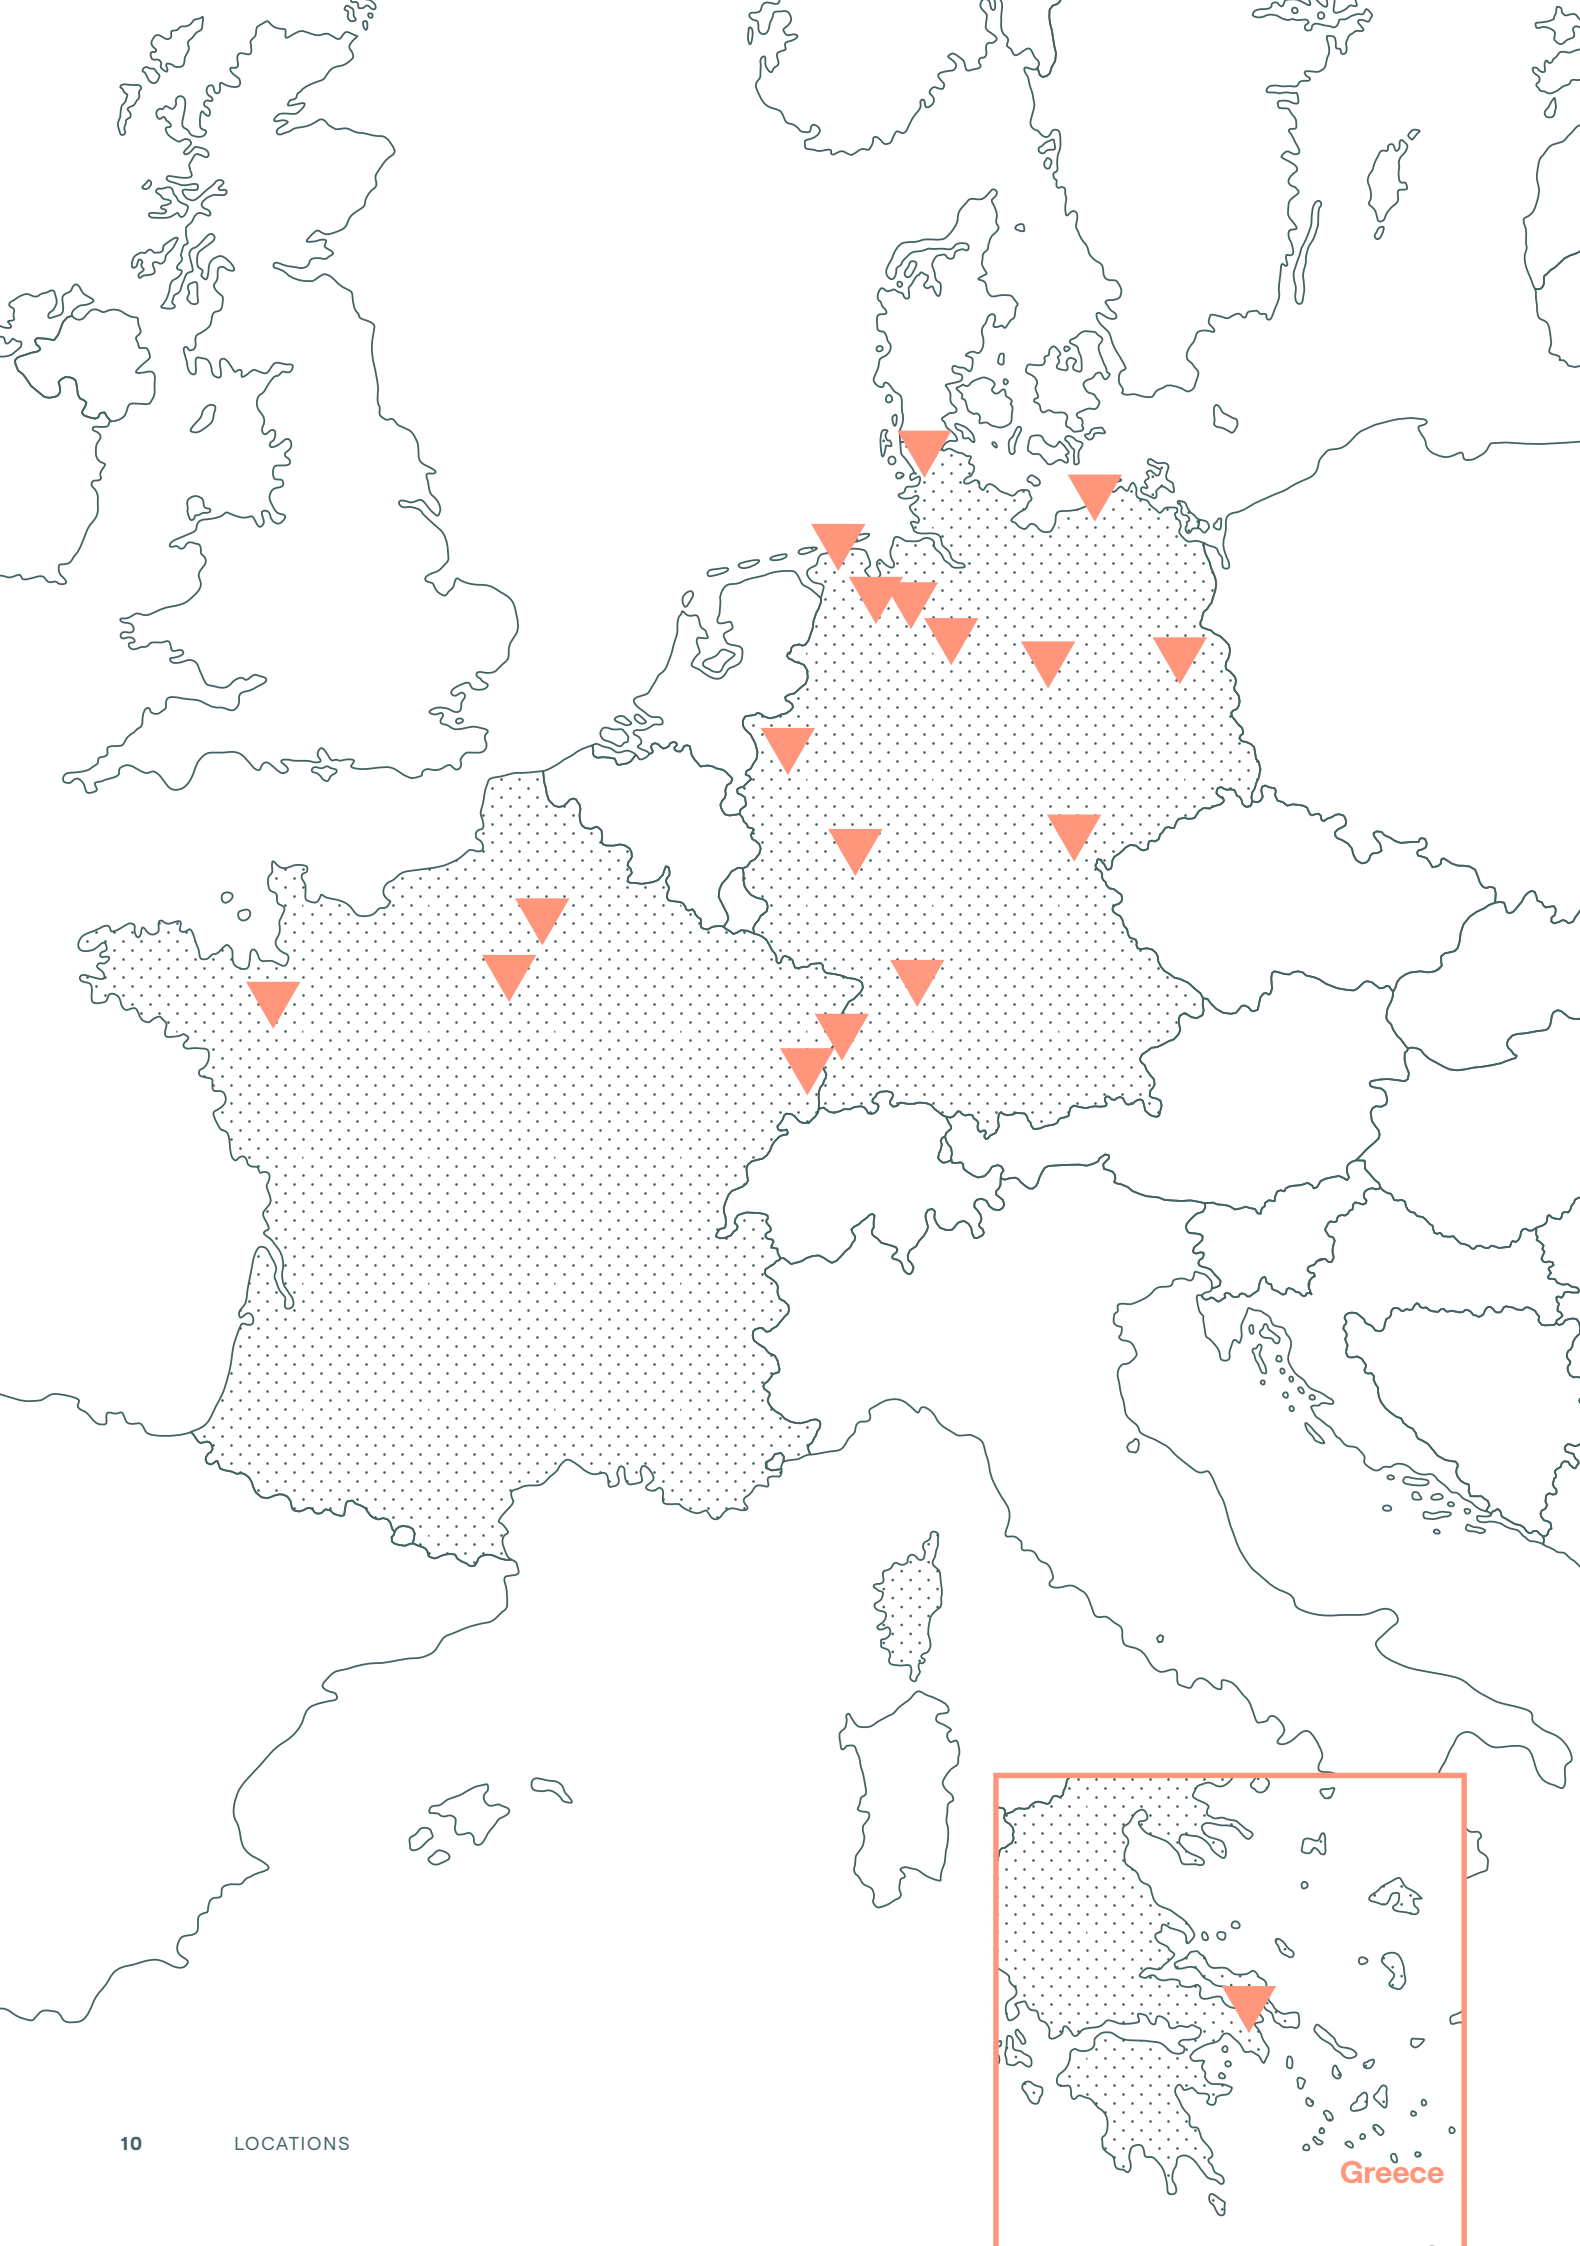

We plan our wind and solar farms independent of a specific manufacturer. Alterric invites tenders for every project and every location, regardless of brand. To this end, we have been working with all leading turbine and system manufacturers for many years.

Our mission is:

100 percent energy transition

We have already made good progress towards our ambitious goal: Alterric's plant portfolio currently includes **2,400 megawatts** of installed capacity. Our generation portfolio stands for more than seven million tons of carbon dioxide emissions saved per year. And in our project pipeline, another **10,000 megawatts** are waiting to be implemented. By **2030**, we aim to realize more than **300 megawatts** of new capacity per year and invest a total of **3.6 billion euros** in a sustainable energy system. Overall, we will expand Alterric's green energy generation capacity to around **5 gigawatts**.

Born in Germany. At home in Europe.

Alterric successfully expands renewable energies regionally and internationally. Partnership benefits from proximity. This is why our teams work at **18 locations across Europe** in Germany, France and Greece.

OUR LOCATIONS

Alterric in Germany:
Aurich, Berlin, Bremen,
Düsseldorf, Freiburg, Hannover,
Herrenberg, Hof, Husum,
Magdeburg, Mainz, Oldenburg
and Rostock

Alterric in France:
Paris, Mulhouse,
Margny-les-Compiègne
and Chartres-de-Bretagne

Alterric in Greece:
Athens

GET IN TOUCH WITH US

Are you interested in cooperating with Alterric or do you own land that is suitable for a wind or hybrid farm? We look forward to getting to know you.

Contact us by phone:
+49 (0) 4941 9363 300 or by mail:
contact@alterric.com.

The future of energy is powered by teamwork

We are committed to a future in which renewable energies empower a successful community. To this end, we create intelligent energy solutions for generations.

Do you share this idea?

In Alterric you will find a partner who realizes projects with energy, innovative ideas, and a solid foundation backed by experience and economic strength. Let's get started on a joint project. For you. For us. For the future.
